

A better way to drive.

Ethanol and biodiesel are the first fuels in over 100 years to challenge oil's monopoly at the pump, adding more supply to the fuel market. Merrill Lynch analysts estimate gas prices would be 15% higher without renewable fuels. And now, even cleaner and better renewable fuels are being developed in Canada. That is good news for the environment, good news for home-grown jobs, and good news for Canadians at the pump.
